

Integrated Clinical Experience (ICE) Planned Learning Experience (PLEX)

Social Determinants of Health (SDOH) II Required

Goal: To begin to consider community/patient population needs to guide Learning Activities

Objectives	Description of Learning Experience	Resources and Time to Complete
1. Recall SDOH and apply to a clinical population 2. Understand how SDOH impact a community or patient population 3. Determine what additional information is needed to better understand the needs of the clinical population NOTE: To be completed within first two days of week 1	1. Discuss 2 important points from Rethorn 2019 article with CI 2. Select 2-4 patient cases that you have encountered at the clinical site. With team and CI, identify which SDOH may be impacting each patient in a protective or detrimental way. 3. If you are unable to easily identify these factors from your patient interaction, how could you have identified these factors? What other information do you need to understand these factors? How can you obtain that information? 4. Discuss any commonalities in the SDOH that are impacting the 2-4 patient cases that you reviewed. What appear to be some of the health needs, besides the reason for seeing a PT, of these patients? 5. Determine what key individuals (other disciplines, patients, administrators) could help you better understand the needs of the patients	Resources: Materials from Health Promotion and Wellness I and ICE II prep sessions, Rethorn 2019 article Time to Complete: 45 min - 15 minutes to review patient cases - 30 minutes to identify what needs appear to exist or how this information can be obtained
